Case Study

When SCA Packaging (North West) Ltd had difficulties with uneven and damaged floor areas, which were causing disruption and potential danger for their fork lift trucking operations – they called in **NCC** to provide advice and assistance – unbelievably still a free service offered by **NCC** in the region!

The client needed to repair the damaged floor areas, make good joint arrises and provide a level slip resistant surface finish.

NCC were able to propose a complete Sika System: Sikafloor 91 epoxy mortar to repair the damaged areas and reform the joint arrises, followed overall by Sikafloor 156 epoxy primer, and 2 coats of Sikafloor 261 solvent free epoxy coating, incorporating silica sand to give the desired degree of slip resistance.

Specialist local contractor P J McGrath & Sons was selected to carry out the works, which have now all been completed to the client's satisfaction.
