

The Bright Screw Company, Leeds

Case Study

The Bright Screw Company are Precision Engineers in Yorkshire. Due to the high quality and efficiency of their operation, they are experiencing continually increased demand for their products. This was putting more and more demands on their production area, and their Precision Lathes in particular.

Bright Screw wanted to upgrade the floors of the Machine Workshop, to ensure slip resistance for their employees, and their continued efficiency for increased production rates in the future.

However the existing concrete floor was heavily contaminated with oil. The time constraints on their production meant that anything to be done must be completed with absolutely No Downtime for the Lathes!

Then the first edition of our Newsletter arrived on Manager Dave Greasley's desk, and he contacted **NCC** for advice – as no one else had been able to solve his quandary!

NCC were instantly able to recognise a virtually 'tailor made' solution to Bright Screws problem-recommending and supplying Ronadeck TackTile Sheets. These were quickly and easily mechanically fixed into the contaminated floor, providing slip and skid resistant walkways around, and between, the high precision equipment for their personnel.
