

IVAX Pharmaceuticals, Runcorn

Case Study

P J McGrath and Sons, specialist flooring contractors, working with the support of **NCC**, have now completed more than 3,200 square metres of high performance hygienic flooring in Runcorn. This was for leading generic pharmaceuticals manufacturer IVAX Pharmaceuticals at their 'state of the art' modern product facility in Preston Brook.

During the last three years P J McGrath have applied 1,200 square metres of high tolerance clean room floors and with the latest phase completed, there are also 2,000 square metres of hygienic and easily cleaned production and packaging area floors, all using advanced Sikafloor systems supplied by **NCC**.

This latest phase was completed using a bright blue Sikafloor 261 self levelling resin, finished with a silk matt Sikafloor 356N top coat, to achieve a uniform easily cleaned and level surface.

Sikafloor 261 is a solvent free epoxy flooring resin that is available in almost any colour and is ideal for providing a durable seamless surface. Sikafloor 356N is a solvent free polyurethane resin top coat which provides the silky matt finish.

Slip resistance and non-slip profiles have also been included for safety reasons where necessary.
